WinProb: Media Test Evaluator

This application evaluates media test performance for Disney+ and Hulu by estimating the probability that each test cell is the top performer (winning probability). It supports both *Incrementality tests* (with a control group) and *Split tests* (e.g., A/B/C tests without a control group) conducted with media partners.

Results are generated using Hulu's proprietary Winning Probability framework, which incorporates statistical uncertainty to provide a more reliable view of relative performance in addition to traditional significance testing.

For additional details, please refer to [the App Documentation](#). For questions or support, please contact Max Wilson or Shirley Deng on the BLADE team at maxim.wilson@disney.com or shirley.deng@disney.com.

Please select a test type:

- ☒ Incrementality test (Treatment vs Control)
- ☐ Split test (A/B/C without control)

Incrementality Test (Treatment vs. Control)

Test Parameters

See [here](#) for an input template with the correct format for Incrementality Test Data.

Upload Test Data as a CSV or Excel file:
